Le Hoang Phuc

AI Engineer · Hanoi, Vietnam · +84 90 000 2202 · phuc.le@example.com · github.com/example-lhphuc

Profile

AI engineer with over four years of production experience, the last two building LLM and agent products for students and teachers. I lead the evaluation and retrieval side of a system end to end, from dataset design through deployment and post-release support, and I use AI coding agents daily while reviewing what they produce.

Professional Experience

Senior AI Engineer *Aug 2024 – Present*

LearnLoop Edtech, Hanoi — tutoring platform with 120,000 monthly learners

- Built a conversational tutor in LangGraph with tool use, memory and multi-step orchestration, served through async FastAPI services in Docker on Kubernetes.
- Implemented hybrid retrieval (BM25 + dense + reranker) over 300,000 course chunks in PostgreSQL/pgvector and Qdrant; answer groundedness rose from 71% to 92%.
- Designed evaluation sets with subject-matter teachers and LLM-as-judge scoring for accuracy, hallucination and safety; evaluations run in CI and block regressions before release.
- Instrumented tracing with Langfuse; added model routing, semantic caching and per-user quotas that cut LLM spend by 38%.
- Delivered a rubric-based essay grading assistant with human-review steps and LMS single sign-on integration.

Machine Learning Engineer *Jun 2022 – Jul 2024*

Sao Mai AI Solutions, Hanoi

- Shipped document-classification and information-extraction models to production for insurance clients, using PyTorch and Hugging Face.
- Built the first internal LLM gateway with structured outputs, guardrails and fallback between hosted APIs and open-weight models.
- Fine-tuned Vietnamese embedding models that raised retrieval recall@10 by 11 points on client data.

Education

M.Sc. in Data Science and Artificial Intelligence *2022 – 2024*

University of Science, Vietnam National University, Hanoi

B.Eng. in Software Engineering *2018 – 2022*

Posts and Telecommunications Institute of Technology

Publication

Le, H. P. and co-authors (2024). Evaluating Groundedness of Retrieval-Augmented Tutors on Vietnamese Course Material. *Workshop on AI for Learning and Teaching*.

Open Source & Teaching

- Maintainer of *vi-rag-eval*, a small Python toolkit of Vietnamese evaluation sets for RAG systems.
- Mentored four junior engineers; guest lecturer for a university short course on practical LLM engineering (2025).

Skills

Core: Python, FastAPI, asyncio, SQL, PostgreSQL, Redis, Docker, GitHub Actions, Prometheus. **LLM:** OpenAI and Anthropic APIs, Llama and Qwen open-weight models, LangChain, LangGraph, LlamaIndex, prompt and context engineering, embeddings, reranking, Langfuse. **ML:** PyTorch, scikit-learn, model fine-tuning. **Tools:** Claude Code, Cursor. **Languages:** Vietnamese (native), English (professional, IELTS 7.5).
