PROFESSIONAL SUMMARY

Data engineer with 5 years of production experience building lakehouse-style platforms on AWS. I own pipelines from object storage through raw, staging and mart layers, and I care most about correctness, idempotent reruns and changes that a reviewer can actually follow. Recent work covers vehicle-fleet telemetry and large volumes of unstructured documents and logs.

TECHNICAL SKILLS

Languages	Python (typed, tested, packaged), advanced SQL (window functions, incremental logic, tuning), Bash
Orchestration	Apache Airflow 2.x (DAG design, retries, idempotency, backfills), Kubernetes executor
Processing	Apache Spark / PySpark (partitioning, joins, shuffles, dedup, windowing), Kafka
Modelling	dbt (incremental strategies, tests, docs), Kimball dimensional modelling, SCD Type 2
Storage	ClickHouse (ReplicatedMergeTree, Distributed tables, sharding keys), AWS S3, Parquet, Iceberg, PostgreSQL
Unstructured	PDF/OCR extraction, log parsing, image and audio metadata, embeddings, Qdrant vector search
Governance	OpenMetadata, Great Expectations, lineage, data classification, personal-data erasure workflows
Platform	AWS IAM, Secrets Manager, EKS, Helm, GitLab CI/CD, Argo CD, Docker

EXPERIENCE

Senior Data Engineer

Mar 2024 – Present

Hanami Mobility Data JSC — connected-vehicle analytics, Hanoi

- Run a platform ingesting 4 TB/day of telemetry from about 60,000 connected scooters and vans from S3 into raw, staging and mart layers using Airflow and PySpark.
- Designed fact tables and SCD Type 2 dimensions in dbt on a 6-shard, 2-replica ClickHouse cluster; dashboard P95 query time fell from 14 s to 1.8 s after reworking sharding keys and partitioning.
- Built a pipeline that parses after-sales PDFs, workshop notes and photos, extracts structured attributes and lands queryable tables; 2.3 million documents processed to date.
- Added Great Expectations checks and OpenMetadata lineage for 180+ tables, including unstructured datasets, and wrote runbooks now used by on-call engineers.
- Implemented a personal-data erasure workflow covering S3 objects and ClickHouse parts, with an auditable completion report.
- Led a 14-month historical backfill with zero duplicates by making every load idempotent and verifying row counts per partition.

Data Engineer

Jul 2021 – Feb 2024

BlueRiver Logistics Tech — parcel network platform, Ho Chi Minh City

- Migrated 90+ cron scripts to Airflow DAGs with retries, SLAs and no heavy work at parse time; pipeline failures fell by about 70%.
- Wrote PySpark jobs that deduplicate and window 800 million scan events per month on EMR.
- Moved reporting to dbt on Redshift with environment-specific configuration and tested merge requests for dev, staging and production.

SELECTED PROJECTS

Log Search for Fleet Diagnostics

- Parsed semi-structured device logs into Parquet with schema evolution, then embedded error messages for similarity search in Qdrant to shorten root-cause analysis for support engineers.

EDUCATION & LANGUAGES

B.Eng. in Computer Science, Hanoi University of Science and Technology, 2017 – 2021

Vietnamese (native); English (professional, IELTS 7.0)
